# TR^DING 212

# Advanced IT Bootcamp

Trading 212 is one of the leading neobrokers in the UK and Europe. We have over 1.5 million clients who invest in the stock market with zero commission through our top rated mobile and web apps.

We are offering a unique opportunity to fast-track your knowledge and career by enrolling in our software development bootcamp.

**Not your typical IT academy.**

The course is intensive and requires full commitment. That's why those we have accepted will be hired at a full-time position and will receive a salary while learning.

We won't waste your time showing you "Hello World" examples. The goal is to deepen your understanding of important engineering concepts, teach you advanced technologies and workflows and extend your practical experience.

The bootcamp program lasts 4 months and should you complete it successfully, you will be presented with the opportunity to join the Trading 212 team and work on our core product.

As part of the training, we will provide you with a copy of our real environment/product and you'll be challenged to tinker with it by solving real-world problems. This will help you develop technical and soft skills that would quickly make you an invaluable asset to our IT organization.

What we assume you already have:
- Drive to learn
- Basic understanding of data structures and algorithms
- Analytical thinking

Nice to have:
- Ongoing or complete CS education
- Previous experience with IT engineering

What we offer:
- Lectures led by great professionals on a carefully paved educational track
- A lot of hands-on practical exercises
- Invaluable contact with our top software engineers who will help you advance your technical knowledge as well as finance/investing domain knowledge

The bootcamp will cover:
- Networking Fundamentals
- OOP, Java language specifics, Spring and other commonly used frameworks
- RDBMS
- AMQP
- Microservices
- Operating at scale
- Distributed Systems
- Logging, Monitoring, Alerting and general Housekeeping
- Understanding frontend tech at a rudimentary level
- Testing
- CI/CD and general DevOps principles

Are you willing to build up your career with us? We'd love to hear from you! Please send us your resume in English to the following email: hr@trading212.com.
