

JOB DESCRIPTION

Application Software Developer

M2M Services develops and manufactures products, and provides cloud and connectivity services for the IoT. The company's portfolio consists of communication equipment for the security industry, energy distribution, logistics and more.

All devices are connected to the cloud, where the clients can oversee and manage them using our mobile application.

For the role of Application Software Developer, we seek creative candidates to support the development of our cloud infrastructure.

This position will report directly to the CTO and will collaborate closely with other members of our software development department.
