

## Data Mining Specialist

Good data is the origin of all good business decisions, especially in the telecommunications business where the abundance of data can make this a great opportunity and challenge. The function of the data mining team will be to support business decisions by ensuring accurate, innovative and relevant data is provided in a timely manner to be leveraged effectively.

### Main responsibilities:

- Design and implement an effective process for supporting the commercial organization in their data needs
- Extract data from primary or secondary data sources and maintain databases/data systems
- Identify, analyze, and interpret trends or patterns in complex data sets
- Provide innovative and efficient solutions to data needs
- Filter & “clean” data and deliver in an easy to understand format to request initiators
- Be efficient in troubleshooting problems with data extraction codes
- Work closely with manager to prioritize business and information needs
- Carry out any other tasks assigned by the line manager and in accordance with the employees’ qualification and responsibilities

### Main requirements:

- Bachelor degree or last year student in Economics, Statistics, Mathematics or similar
- Working experience in a data extraction/mining related role within network industries will be an advantage
- Strong knowledge of and experience with reporting packages (Business Objects etc), databases (SQL etc), statistical packages (SPSS, etc) and programming (XML, Javascript, or ETL frameworks)
- Advanced user of MS Excel and/or Access
- Looks forward to working with large data sets and is excited by deriving insights from such data sets
- Independent, energetic person with flexibility and initiative
- Strong communicator who can present thoughts/ideas in a structured & logical manner
- Ability to work cross-functionally and under stress in challenging environment
- Fluent English
