Junior Java Cloud Software Engineer

ROITI is an IT consultancy focused on the European energy trading market. We build, implement, and maintain standard and custom technology solutions for commodity trading, risk management, asset optimization, reporting, scheduling, and logistics. From our office in Sofia, we service some of the largest power, gas and oil trading companies in Germany, Austria, Sweden, UK, and the Czech Republic.

We are looking for self-driven techies who share our passion for designing and implementing new innovative software solutions, but also extending and maintaining existing applications.

Knowledge in below technologies/fields is a must:

- Java
- Common data structures
- Spring
- REST, HTTP
- At least one ORM (e.g., Hibernate) or persistence framework (e.g., MyBatis)
- RDBMS (MS SQL Server, Oracle, PostgreSQL, or similar)

Here are some of the technologies you will also get the chance to work with (knowledge in them is **not a requirement**) - Cassandra, MongoDB, Apache Kafka, Docker, Azure DevOps, IaaS, PaaS products in Azure. Some projects are full stack, where we utilize Angular for the front-end.

Other skills:

- Good English is a must
- Good German is an advantage
- "Impossible is nothing" attitude.

Key responsibilities:

- Development, configuration, and maintenance of software solutions
- Continuous learning and self-development

We Offer:

- Competitive remuneration package
- Challenges offering professional and personal growth – training, obtainment of certifications, internal learning, and development.
- Health benefits, company sponsored mobile phone plan, Multisport card, options for additional stimuli in the long term.
- Transparent communication within the company
- Pleasant team atmosphere
- Flexible internal policies that allow you to take control of your own schedule – Unrestricted home office, floating working hours.

If you are interested, please send us a CV at careers@roiti.com.
