Software Tester/QA Specialist

IndigoVerge (https://indigoverge.com/) is a web, mobile and cloud solutions studio, developing tailored solutions for our customers. Our portfolio holds projects in the sphere of health, finance, marketing automation, e-commerce, tourism and travel, document management and much more, developed for clients such as ETM, Microsoft, UltraFlex, Nemetschek, Eurosys and others.

In the recent years the company has developed an expertise in a new sector – Internet of Things, and particularly in Industrial IoT and SCADA applications, building of solutions for energy consumption monitoring, for connected devices, data analysis, device and application management and others.

Throughout those 12 years of operation the clients we served have become our partners. Thanks to the IT solutions developed for them, using IoT, Cloud and Big Data, they have grown their business, achieving substantial results. We are glad that they are now trusting us as their ongoing IT solution provider. The formula for this successful business relationship with our customers is: open communication plus individual approach, in-depth analysis and thorough study of each project challenge from a technological and business aspect. Throughout the implementation phase of our project we proactively approach each milestone, proposing realistic, pragmatic, technologically advanced and financially efficient solutions. To us professionalism means high-quality results delivered on time.

Following the expansion of our activities, we are looking to onboard a new team member on the position of **Software Tester/QA Specialist.**

Responsibilities:
- Work closely with the development team to support drafting technical solutions
- Conduct testing on the products to ensure high quality of periodic software application releases for our current projects
- Create and develop test plans and cases based on the requirements, specifications and test strategies
- Suggest and promote possible tools/activities to improve the product quality
- Understand the business and technical requirements fully to produce the test documentation

WHAT IS REQUIRED:
Essential:
- Experience in QA (at least 1 year of related experience)
- Good knowledge of software testing methodologies and procedures
- Experience in writing and executing test plans
- Experience with back-end testing and front-end testing
- Solid understanding of quality assurance theory, terminology, and strategies

What gives you extra points?

- Able to think clearly about possible causes of a bug, and possibly run additional tests to help identify the underlying cause
- Experience in the use of automated testing of web-based and/or desktop applications, to replace manual test processes
- Experience with Selenium
- Experience in creating and executing automated test cases
- Experience working with remote development
- Experience with Agile/Scrum and other software development methodologies
- Bachelor's or Master's Degree

Skills:

- Excellent analytical and problem-solving skills
- Ability to engage with developers in a constructive but firm way about developer testing
- Ability to influence the development process in order to ensure software quality
- Ability to adapt easily to changing requirements
- Ability to learn fast and understand new concepts
- Ability to work both independently and as part of a team

We offer:

- Relaxing and supportive working environment
- Flexible working time, so long as the smooth project communication is not affected
- Work on challenging projects that stir up your creativity
- Career development path
- Competitive remuneration and bonuses for quality work
- Open communication with the management
- Ongoing professional training
- Self-managed projects and open communication with the customer on the project
- Modern and comfortable office located in a communicative location near metro
- Regular team events
- Sports card, along with a convenient sport centre just next door
