

# TRADING 212

## Advanced Frontend Bootcamp

Trading 212 is one of the leading neobrokers in the UK and Europe. We have over 1.5 million clients who invest in the stock market with zero commission through our top rated mobile and web apps.

We are offering an unique opportunity to fasttrack your knowledge and career by enrolling in our software development bootcamp.

### **Not your typical IT academy.**

The course is intensive and requires full commitment. That's why those we have accepted will be hired at a full-time position and will receive a salary while learning.

We're in the process of rewriting all of our frontend apps to React Native, resulting in a single codebase that produces our iOS, Android and Web trading platforms.

And we want you to be part of it.

We're not offering to build React/Angular/<insert FOTM technology here> "coders" who have no idea how it all works under the hood. We're offering to help people with a passion for software development become great engineers with a mind for the product and, ultimately, an invaluable part of the Trading 212 team.

The bootcamp programme lasts 3 months and, should you complete it successfully, you will be presented with the opportunity to join the Trading 212 team and work on our core product.

As part of the training, you will be presented with a "stripped down" version of the Trading 212 Mobile app and tasked with "re-developing" core parts of it. This aims to greatly boost your technical and soft skills, and help you familiarize yourself with the challenges we face on a daily basis.

What we assume you already have:

- Drive to learn
- Basic understanding of data structures and algorithms
- Analytical thinking

# TRADING 212

Nice to have:

- Ongoing or complete CS education
- Previous experience with IT engineering

What we offer:

- Lectures led by great professionals on a carefully paved educational track
- A lot of hands-on practical exercises
- Invaluable contact with our top software engineers who will help you advance your technical knowledge

The bootcamp will cover:

- Web fundamentals
- TypeScript
- Advanced TypeScript
- React, React Native
- Redux
- Redux Saga
- HTTP and WebSocket protocols
- Basic CI/CD and shell scripting

Are you willing to build up your career with us? We'd love to hear from you! Please send your resume in English to [hr@trading212.com](mailto:hr@trading212.com).
